

3701- engine shown with dual ignition and 90 degree exhaust manifold

The 3701 is Hirth's first offering of a water-cooled engine for the aircraft market.

A narrow profile and single tuned exhaust used for all 3 cylinders allows the 3701 to be used in compact engine compartments. Pistons fire 120 degrees apart resulting in very quiet & smooth operations.

3701 incorporates Al-Nikasil coated cylinders for superior performance and reliability. Nikasil provides for a super low coefficient of friction, reducing engine heat and wear. The pistons and cylinders expand at the same rate thus providing for a seizure resistant engine. 3701 crankshaft is 4130 chromemolly steel. Heads, cylinders, rings, block casting, connecting rods and associated components are all of the highest grade alloys available today.

BLEEDING THE COOLING SYSTEM

- REMOVE RADIATOR PRESSURE CAP AND TOP OFF FLUID. ITS BEST TO USE A 50/50 ANTIFREEZE (GLYCOL) / WATER MIX. LEAVE CAP OFF.
- OPEN VENT "V7" ON TOP OF THE STARBOARD RADIATOR AND ALLOW FLUID TO FLOW OUT UNTIL NO AIR IS PRESENT. KEEP TOPPING OFF THE FLUID THROUGH RADIATOR PRESSURE CAP. REPEAT THIS PROCESS FOR EACH OF THE BLEED SCREWS. **THE BLEED SCREW IN THE WATER PUMP IS TRICKY. TRY NOT TO REMOVE THIS SCREW ALL THE WAY DUE TO DIFFICULTIES REINSTALLING.
- NEXT LOOSEN AND BLEED SCREWS "V4", "V5", & "V6" ONE AT A TIME. THESE ARE LOCATED ON THE STARBOARD SIDE OF ENGINE. WHEN THIS IS DONE RUN THE ENGINE UNTIL IT IS WARMED UP THEN REPEAT THE ABOVE.
- TAP SIDE OF THERMOSTAT WITH WOODEN HANDLE WHILE CAP "V1" IS REMOVED UNTIL ALL AIR BUBBLES DISAPPEAR.
- * WHEN ALL AIR IS REMOVED, CHT SHOULD RUN AT 250° F MAX.

- NOTES:
1. POSITION ALL HOSE CLAMPS AS SHOWN ON THIS FORM.
 2. ALL RADIATOR MOUNTS ARE TO BE LINED WITH NEOPRENE FABRIC.
 3. #12 CURRENT HOSE CLAMPS (#6802).
 4. RESTRICTOR INSIDE BOTTOM PORT OF THERMOSTAT.

100HP Water Pump Belt Tension

1. Make sure Water Pump & Housing Assy is level.
2. Failure to do this will give an inaccurate tension reading and premature wear of #6104 Metric V-Belt.
3. Attach a rope to Metric V-Belt in a loop.
4. Attach other end to a pull scale.

#310 on form above
6646- Driver Pulley

5. Pull 1.5 lbs on scale, Metric V-Belt should travel direction you are pulling 3 to 5 mm.
6. Find a point to measure from so your readings are accurate.
7. Continue to raise Water Pump & Housing Assy until tension is achieved.
